

MODULE IN TLE 9 (COMPUTER SYSTEM SERVICING)
First Grading / Week 4 / Day 3

Name of Student: _____ Grade and Section: _____
Name of Teacher: _____

Objectives:
Install application software in accordance with manufacturer’s recommendations and requirements.

- *Comprehend the meaning of application software*
- *Classify the types of application software*
- *Install application Software*

WHAT TO KNOW

Lesson: Install Application Software

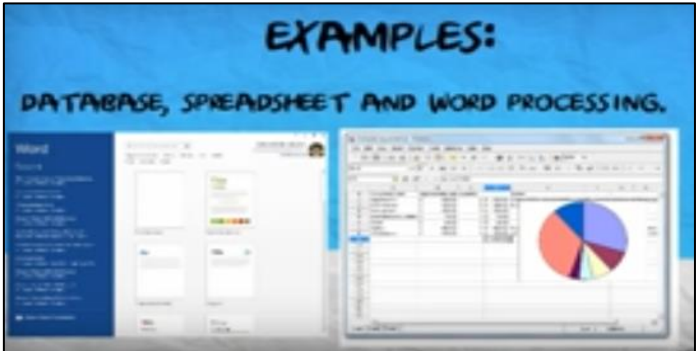

In this lesson, you will be able to comprehend and identify the different software application that are designed to perform a group of functions, tasks, or activities for the benefit of the user.

Application Software
Application software is a major type of computer software and it is also called as end-user program. This software is used to edit text, numbers, and graphics and utilizes the capacities of a computer for the completion of task. The application software includes database programs, word processors, and spread sheets etc.

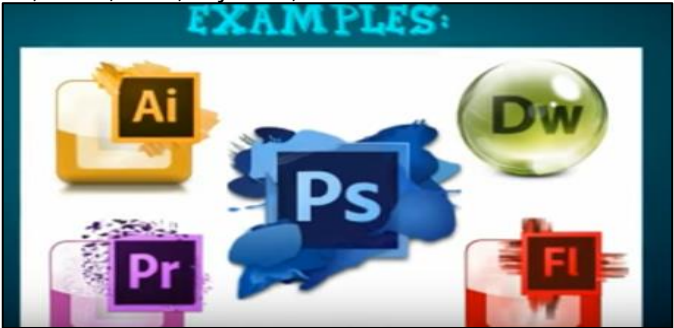

Four (4) Types of Application Software

- **General Purpose** – used for variety of tasks, normally used for school and home, similar graphical user interface. Examples: Database, Spreadsheet and Word processing.

- **Custom Written Software** – also known as bespoke software or tailored made software. Specially developed for some specific organization or other user. Often considered expensive compared to off-the- shelf solutions or products. Examples: Micro Net, Java, PHP, IBM, MySQL, SAP and Oracle

- **Specialized Software** - is written and used for a specific purpose. It is very costly since it is specialized for a specific task.

- **Integrated Software** – is software for personal computers that combines the most used functions of many productivity software programs into one application. Example is Microsoft Office.

Materials required for installing the application software:

- Computer
- CD/DVD drive
- bootable flash drive/installation disc
- Internet Connection
- Web browser

How to Install Application Software on the Computer

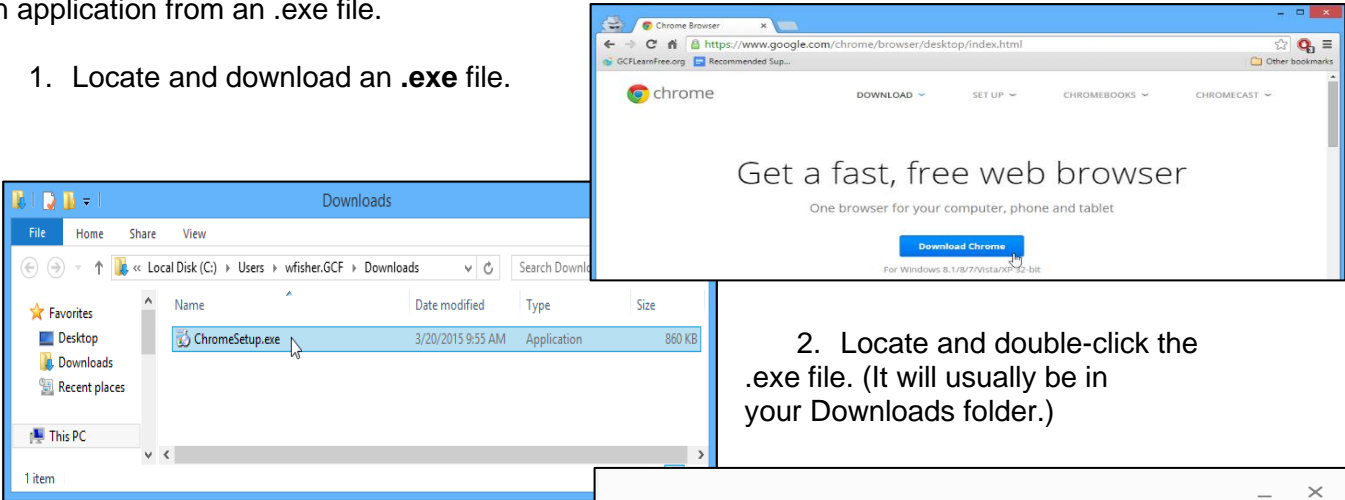

Installing from a CD-ROM

From the mid-1990s through the late 2000s, the most common way to get new software was to purchase a CD-ROM. You could then insert the disc, and the computer would walk you through the installation. Now, almost all software has moved away from this model. Many new computers no longer include a CD-ROM for this reason. However, if you do need to install software from a CD-ROM, simply insert the disc into your computer, then follow the instructions.

Installing software from the Web

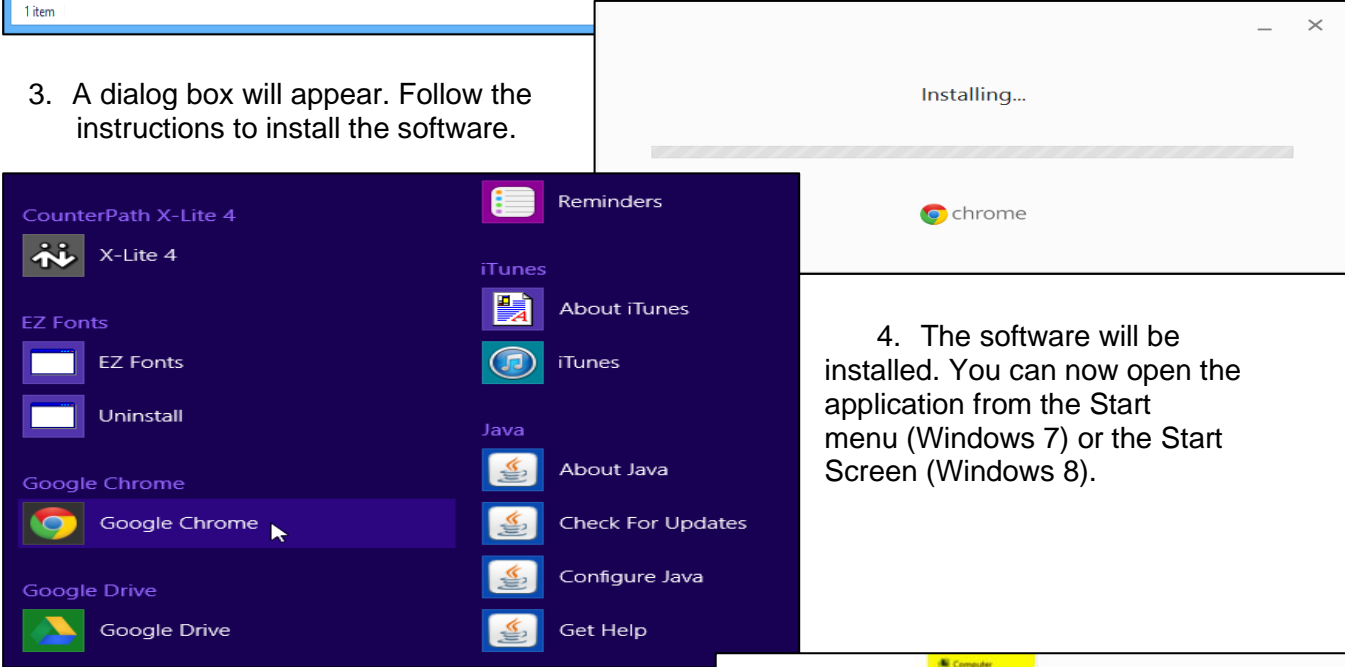

Today, the most common way to get new software is to download it from the Internet. Applications like Microsoft Office and Adobe Photoshop can now be purchased and downloaded right to your computer. You can also install free software this way. For example, if you wanted to install the Google Chrome web browser, search the google chrome and click the Download button. The installation file will be saved to your computer in .exe format. Pronounced dot e-x-e, **this** is the standard extension for installation files on Windows computers. You can follow the steps below to install an application from an .exe file.

1. Locate and download an .exe file.

2. Locate and double-click the .exe file. (It will usually be in your Downloads folder.)

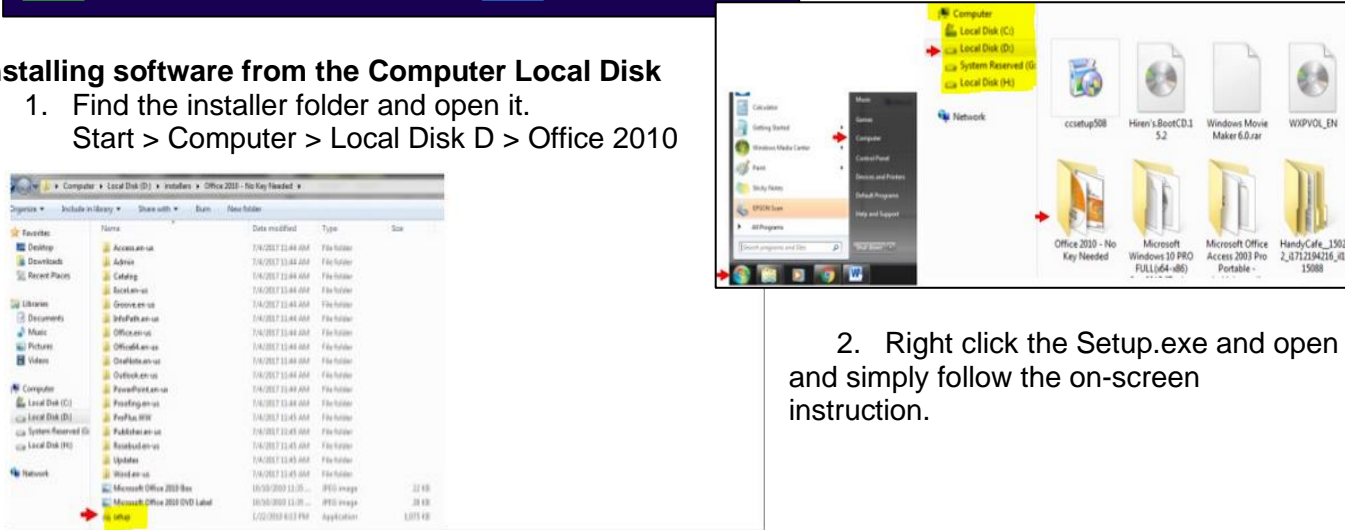

3. A dialog box will appear. Follow the instructions to install the software.

4. The software will be installed. You can now open the application from the Start menu (Windows 7) or the Start Screen (Windows 8).

Installing software from the Computer Local Disk

1. Find the installer folder and open it.
Start > Computer > Local Disk D > Office 2010

2. Right click the Setup.exe and open and simply follow the on-screen instruction.

Name of Teacher: _____

Grade and Section: _____

EXERCISE 1: ENUMERATION

Directions: Enumerate the installation procedures of application software through the following medium:

1. Installing Software from a CD-ROM
-
-
-
2. Installing software from the Web
-
-
-
3. Installing software from the Computer Local Disk
-
-
-

EXERCISE 2: DEFINE

Directions: Define the four (4) types of Application software.

- A. General Purpose Software
-
-
-
- B. Custom Written Software
-
-
-
- C. Specialized Software
-
-
-
- D. Integrated Software
-
-
-

THINGS TO REMEMBER!

Install Application Software

1. Application software is a major type of computer software and it is also called as end-user program. This software is used to edit text, numbers, and graphics and utilizes the capacities of a computer for the completion of task. The application software includes database programs, word processors, and spread sheets
2. Four (4) Types of Application Software: General Purpose, Custom Written Software, Specialized Software, and Integrated Software.

EVALUATION: FILL IN THE BLANK

Directions: Fill in the blank. Read the questions carefully. Write the correct answer/s on the blank to complete the sentence.

1. Set of one or more programs designed to carry out the operation for a specific application/task is the work of _____.
2. Micro Net, Java, PHP, IBM, MySQL, SAP, and Oracle are examples of_____.
3. You can right click Setup exe. And select open in step number _____.
4. Most well-known integrated software is _____
5. Data Base, Spreadsheet and Word Processing are an example of _____.
6. In the mid-1990s through the late 2000s, the most common way to get new software is to purchase _____.
7. Application software is a major type of computer software and it is also called as _____.
8. This software is used to edit text, numbers, and graphics and utilizes the capacities of a computer for the completion of task.
9. Once the software is downloaded, the installation file will be saved to your computer in ____format.
10. The most common way to get new software is to download it from the _____.
