- Objectives:**  
*Assemble computer hardware in accordance with established procedures and system requirements.*
- *Understand the process of disassembling computer system unit.*
  - *Arrange in sequence the procedures in disassembling computer system unit.*

**Lesson: Computer Disassembly**

**WHAT TO KNOW**

One of the basic skills that you must acquire in computer hardware servicing is to independently assemble and disassemble a personal computer (PC) or simply setting up a PC. After familiarizing with all the tools, devices, peripherals and safety precautions I believe that you are now ready to gain another experience in CSS by going through this lesson.

**Disassembling the computer system**

- Before starting computer disassembly, make sure to prepare the following tools:
  - a. Set of screwdrivers
  - b. Anti-static device (Anti-static wrist strap)
  - c. Container for the screw
  - d. Foil
- Disassemble the computer when you have enough uninterrupted time and do not be in a hurry.
- Patience and gentleness are important. Be careful when pulling or removing things together. Mistakes can damage parts and cost you money. Frustration or mishandling can break up parts of computer.
- Always observe safety precaution and procedure.

Now that you know the process on how you disassemble a system unit. Now it's your turn to follow the process by the given activity below.
